

- > All projects now follow methodologies using standardized tools, templates, and procedures.
- > Executive oversight gains better visibility into project portfolio, keeping strategic business objectives on track.
- > Project team enjoys higher levels of collaboration and consistency across projects and managers.

Insurance Company's Enterprise Project Management Policy Underwritten by Anexinet PMO Solution

The Challenge

A major international insurance and financial services organization with operations in more than 130 countries and jurisdictions sought to implement Enterprise Project Management (EPM). Goals were to manage and monitor IT projects to ensure achievement of strategic business objectives. Specifically, the company wanted to increase its return on investment and business value from projects through the use of industry best practices. By institutionalizing formal project management standards based on best practices for use in all business areas, the company expected to reduce risks and operate with competitive advantages of predictable and reliable project successes.

The Solution

Attracted by Anexinet's PMP® (Project Management Professional) certifications from the Project Management Institute (PMI®) and utilization of best practices, the client agreed to implementation of Anexinet's Program Management Office (PMO), an EPM solution based on Microsoft Project Server 2003 and Share Point Services technology. The Anexinet PMO provides real-time visibility, insight and control of strategic objectives that empower decision makers to manage for business value throughout an entire project portfolio. PMO processes took the client from their project initiation phases through planning, execution and closure. Since the client was already using Microsoft Project to manage project planning, implementation of Anexinet's PMO solution was fairly seamless. Anexinet continued to assist with data migrations for all ongoing projects. Once online, all project stakeholders were teamed for oversight, management, collaboration and reporting over a secure EPM web site.

The Benefits

The client-side implementation of Program Management Office developed for Anexinet's internal use aligned perfectly to the insurance company's goals. From planning to closure, all projects now follow methodologies based on industry best practices using standardized tools, templates and procedures. With a big picture view of the company's entire project portfolio, executive oversight is better equipped to set priorities and manage projects for strategic business objectives. Companywide, project team members enjoy higher levels of coordination, collaboration, information sharing, professionalism and consistency across projects and managers. By improving capabilities to plan and deliver projects within predictable timeframes and budgets, the company is better positioned to leverage its IT resources for greater business value and competitive advantage.

Anexinet automates business processes to improve operational performance, competitive advantages, and IT value with qualitative and quantitative return on investment. Solutions leverage the domain expertise of experienced consultants and business professionals, based on a proven Program Management Office (PMO) delivery model that harnesses more than 20 years of industry best practices. Anexinet's PMO provides consolidated real-time management for all aspects of solutions planning and delivery. Automated, client-focused enterprise project management keeps solutions on track, within time and budget, and aligned with client objectives.
