

Mobility Solutions

Provide your workforce with access to information anytime, anyplace, anywhere

As advancements to laptops, tablets, smartphones, and other digital devices continue to flood the market, many organizations are trying to determine which direction will best support and grow their business. By 2012, there will be 397 million mobile workers, representing 73% of the enterprise workforce. Over 43% of IT resource time will be spent handling support related requests by employees with their consumer personal devices.

The need to provide remote users with access to information anytime, anyplace, anywhere will be integral to a company's success. Today's organizations need to determine strategies and approaches to handle mobility across a variety of technologies while creating a secure and valuable user experience.

ANEXINET EXPERIENCE

Anexinet leverages collective skill sets across Application, Business Intelligence and Infrastructure to address factors surrounding Mobility solutions. Anexinet has proven experience to address accessibility, management, performance and security which are the key components to any Mobile Strategy. Below are the three practice areas and core capabilities that we can assist our clients with:

Mobile Applications - Enterprise end users have become highly mobile, using both personal and company-issued smartphones and tablets to access corporate data and get work done from anywhere.

- A Mobile Enterprise Application Platform (MEAP) serves as both a development environment and a management tool for mobile enterprise applications.
- MEAP consists of two elements:
 - Mobile app dev environment and back-end services to manage the applications linked to enterprise databases
 - Centralized management enables administrators to control which users can access applications and into what enterprise databases with appropriate security controls

Mobile Data Access - Increase productivity, by giving customers and partner's access to the information you provide them, wherever and whenever they need it. Save time, by enabling mobile workers to make decisions based on the right information, right now.

- Give on-the-go employees quicker and deeper insight into their data, through the use of interactive, visual analytics on the mobile devices.
- Speed-up the decision making process, by extending critical information out to decision-makers in the field.

Mobile Device Management - There are now multiple mobile device operating systems, and enterprises must get smart about managing and security these platforms.

- No longer can an enterprise standardize on one type of mobile device.
- More than half of enterprises must manage multiple mobile operating systems and most are being pressured to incorporate employee-owned devices as well.
- Implementation of Mobile Device Management platforms including Zenprise, Afaria, Mobile Iron, Good
- Provide further integration of personal devices
- Virtualization on mobile platforms
